

Formally Verified Resource Bounds through Implicit Computational Complexity

Neea Rusch
Augusta University, United States

SPLASH 2022 Doctoral Symposium
6 December 2022

Introduction

I work on *applying* implicit computational complexity theory.

Question: how to assure a program behaves correctly?

Significance of Resource Bounds

- Constant-time programs
- Excessive time/space usage makes programs fail

Hypothesis

From Implicit Computational Complexity (ICC) we get new approaches to automatic program analysis and can resolve certain limitations.

Implicit Computational Complexity (ICC)

Let L be a programming language, C a complexity class, and $\llbracket p \rrbracket$ the function computed by program p .

Find a restriction $R \subseteq L$, such that the following equality holds:

$$\{\llbracket p \rrbracket \mid p \in R\} = C$$

The variables L , C , and R are the parameters that vary greatly between different ICC systems¹.

mwp-Flow Analysis²

For an imperative program:
is the growth of input variable values polynomially bounded?

Will use the *mwp*-flow analysis to determine this.

²Neil D. Jones and Lars Kristiansen. “A flow calculus of *mwp*-bounds for complexity analysis”. In: *ACM Trans. Comput. Log.* 10.4 (Aug. 2009), 28:1–28:41. DOI: 10.1145/1555746.1555752.

The *mwp*-Calculus

- Track how variable depends on other variables.
- Flows characterize dependencies:
 - 0 - no dependency
 - m - maximal
 - w - weak polynomial
 - p - polynomial
- Apply inference rules to program statements.
- Analysis result is collected in a matrix.

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>m</i>	0	0
X2	0	<i>m</i>	0
X3	0	0	<i>m</i>

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>m</i>	0	<i>p</i>
X2	0	<i>m</i>	0
X3	0	0	<i>m</i>

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>m</i>	0	0
X2	0	<i>m</i>	<i>p</i>
X3	0	0	<i>m</i>

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>m</i>	0	<i>p</i>
X2	0	<i>m</i>	<i>p</i>
X3	0	0	<i>m</i>

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>m</i>	0	0
X2	<i>w</i>	<i>m</i>	0
X3	<i>w</i>	0	<i>m</i>

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>m</i>	0	0
X2	<i>w</i>	<i>m</i>	0
X3	<i>w</i>	0	<i>m</i>

$= M^*$

mwp-Analysis Example

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3	
X1	<i>p</i>	0	<i>p</i>	= C;C
X2	<i>p</i>	<i>m</i>	<i>p</i>	
X3	<i>w</i>	0	<i>m</i>	

mwp-Analysis Example - Final Result

```
void main(int X1, int X2, int X3){  
    if (X1 < X2) {  
        X3 = X1 + X1;  
    }  
    else {  
        X3 = X3 + X2;  
    }  
    while (X1 < 0){  
        X1 = X2 + X3;  
    }  
}
```

	X1	X2	X3
X1	<i>p</i>	0	<i>p</i>
X2	<i>p</i>	<i>m</i>	<i>p</i>
X3	<i>w</i>	0	<i>m</i>

Analysis Soundness

For program C and mwp -matrix M^3 ,

- Relation $\vdash C : M$ holds iff there exists a derivation in the calculus.
- $\vdash C : M$ means the calculus *assigns* the matrix M to the command C .
- Command C is *derivable* if the calculus assigns at least one matrix to it.

Theorem (Soundness)

$\vdash C : M$ *implies* $\models C : M$.

³Jones and Kristiansen, “A flow calculus of mwp -bounds for complexity analysis”, p. 11.

Proving Programs

- Prove that some property holds with the strongest possible guarantee.
- Done using an interactive theorem prover.
- Construct rigorous logical arguments.
- Machine-checkable for correctness.

Trade-off

Mechanical proofs require specifying every detail (slow, tedious).

Get the strongest possible guarantee of correctness.

My Goal

- Prove the *mwp* analysis technique.
 - As defined in the original paper.
 - Using the Coq proof assistant.

Steps - 1 of 4

Define the programming language under analysis.

- Simple, memory-less imperative language.
- Syntax: variables, arithmetic and boolean exp., commands.

Steps - 2 of 4

Define the mathematical machinery.

- Need e.g., (sparse) matrices, semi-ring.
- Other related mathematical concepts e.g., honest polynomial.

Steps - 3 of 4

Implementing the typing system.

- Define the flow calculus rules⁴.
- Define a typing system.

⁴There is some non-determinism in these rules

Steps - 4 of 4

Prove the paper lemmas and theorems.

- There are 8 lemmas and 7 theorems.
- The soundness theorem, $\vdash C : M$ implies $\models C : M$, is essential.
- “These proofs are long, technical and occasionally highly nontrivial.”⁵

⁵Jones and Kristiansen, “A flow calculus of *mwp*-bounds for complexity analysis”, p. 2.

Expected Main Result

A *certified* complexity analysis technique.

- Proves a positive result obtained by analysis is correct.
- Establishes certified “growth bound” on input variable values.

Timeline and Progress

Discussion

Many directions can follow from the correctness proof
e.g., a formally verified static analyzer.

- Our previous work: adjusting analysis makes it it practical and fast⁶
- Proof would show the original technique is correct, but not fast.
- It should be possible to combine those two results.
